1 Ejercicio 1 y 4

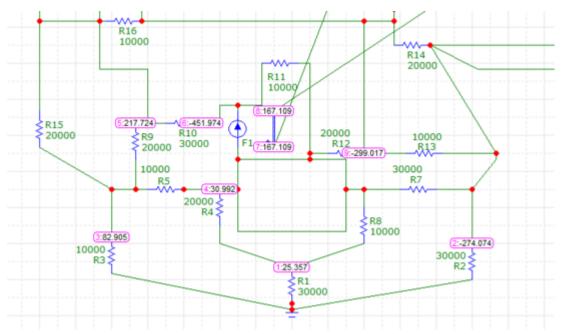

Se utiliza el programa Micro Cap. Se juntan ambos ejercicios para tener más claridad.

Se referirá a las corrientes de rama por el nombre del elemento de circuito por el cual la corriente circula. Se muestra el circuito por partes.

Los valores en forma tabulada son:

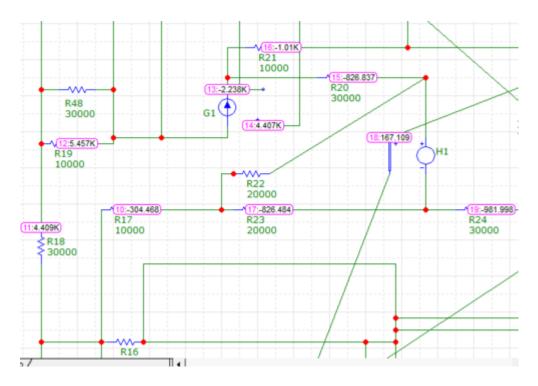

1					
Node	Voltage	Node	Voltage	Node	Voltage
1	25.357	2	-274.074	3	82.905
4	30.992	5	217.724	6	-451.974
7	167.109	8	167.109	9	-299.017
10	-304.468	11	4.409K	12	5.457K
13	-2.238K	14	4.407K	15	-826.837
16	-1.010K	17	-826.484	18	167.109
19	-981.998	20	-1.030K	21	-302.414
22	2.546K	23	4.836K	24	3.955K
25	4.668K	26	4.294K	27	4.856K
28	4.744K				

A continuación se muestra donde están ubicados estos valores y se utilizan para calcular las corrientes de rama.

El nombre del nodo está escrito en la izquierda y su tensión de nodo luego de los dos puntos.

Se utiliza el comando "source two.cir" para cargar el circuito, una vez cargado exitosamente se usa el comando "op" para simular corriente continua. Después se usa el comando "print all" para mostrar todas las tensiones de nodo, note que está enumerado de la misma forma que el circuito de Ltspice y el de Micro Cap.

e+x representa un factor de 10^x
